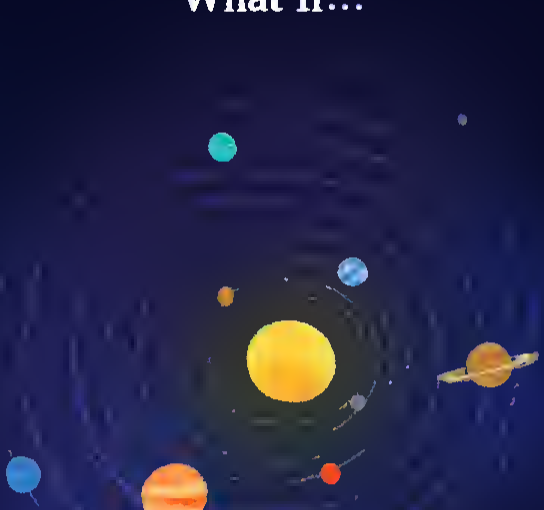
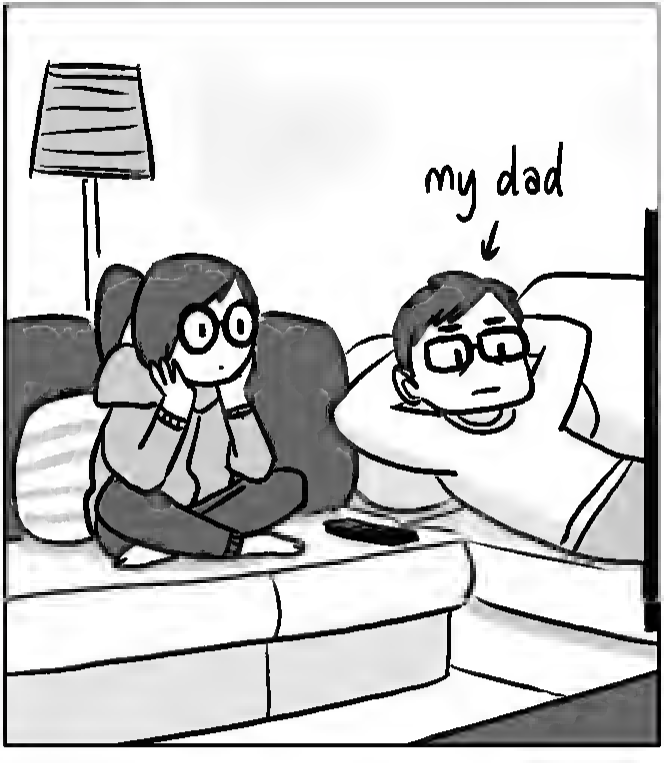
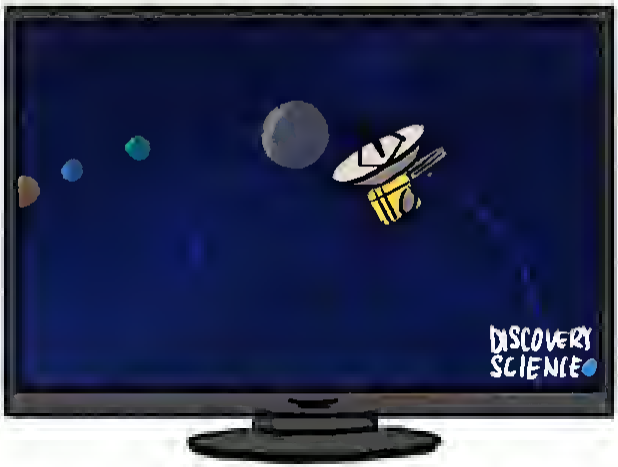
ROAR STREET JOURNAL

What If...





my dad



DISCOVERY
SCIENCE

The New Horizons Explorer was launched in 2006 and is continuing its journey pass Pluto and outside the solar system...
Science is amazing...

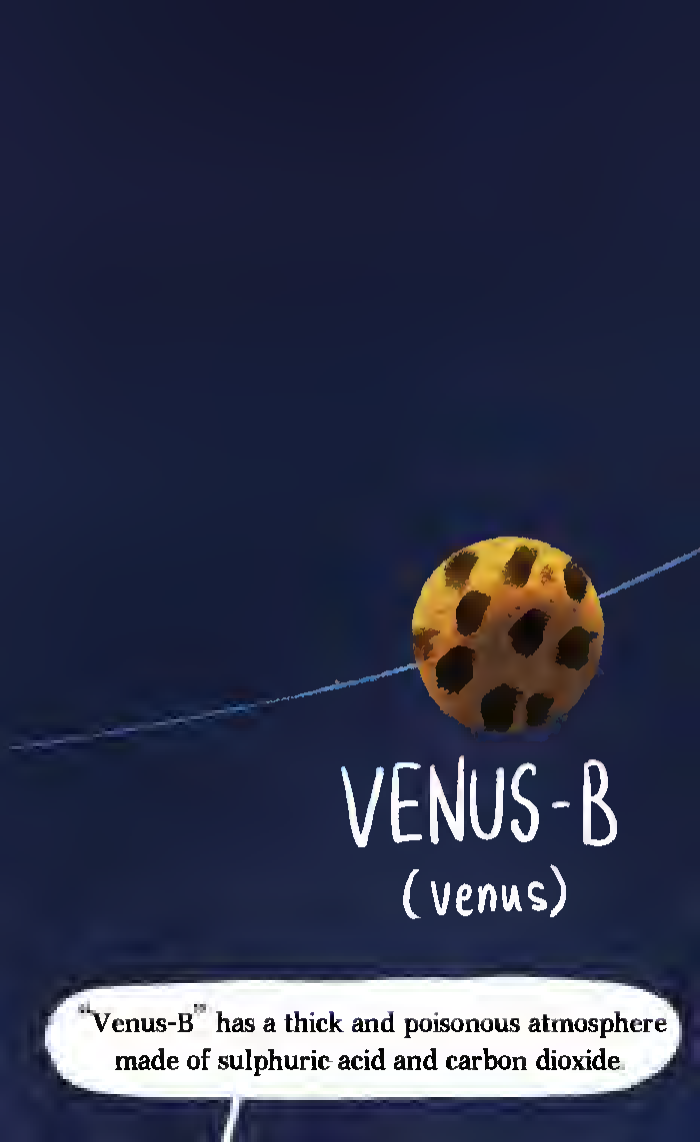
What if...
RSJ was the
SOLAR SYSTEM

BON
(the sun)

The heat and light of the "Bon" comes from the passion of our author, which controls the fate of the RSJ solar system.

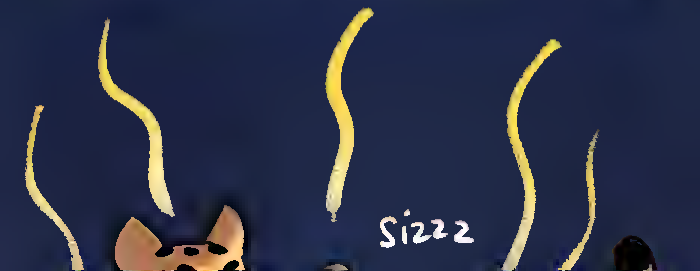
MERCURSIE
(mercury)

Because it rotates slowly, it collects energy and debris from the Bon to grow vegetation on the shadow side.



VENUS-B
(venus)
"Venus-B" has a thick and poisonous atmosphere made of sulphuric acid and carbon dioxide.

The thick atmosphere also traps heat and makes "Venus-B" the planet with the hottest surface



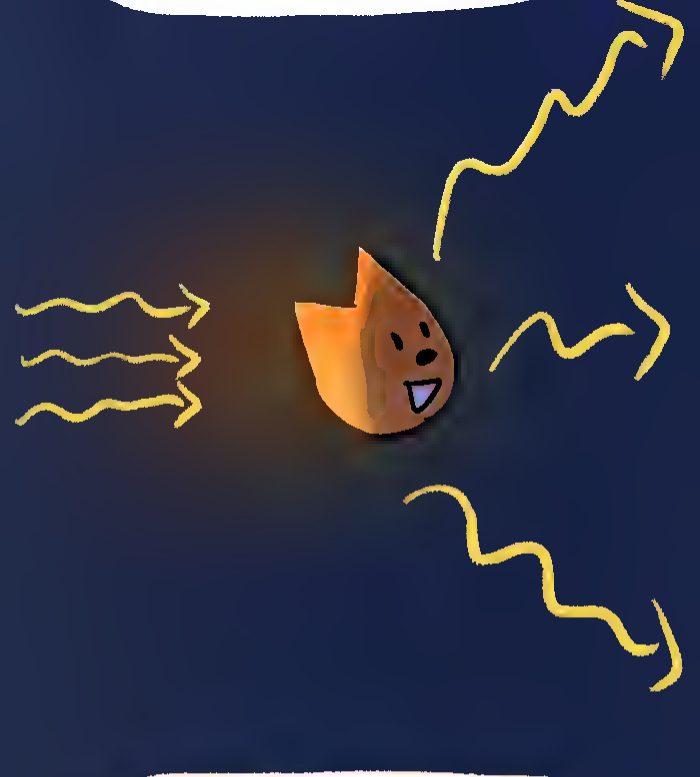
EARTHLEPHUNK
(earth #1)

"Earthlephunk" is the one of the two human-livable planet in the RSJ solar system

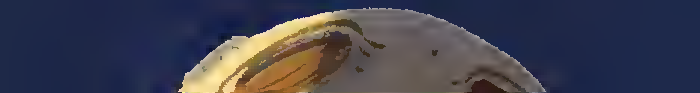
It has a balance of 5 elements that sustains life.

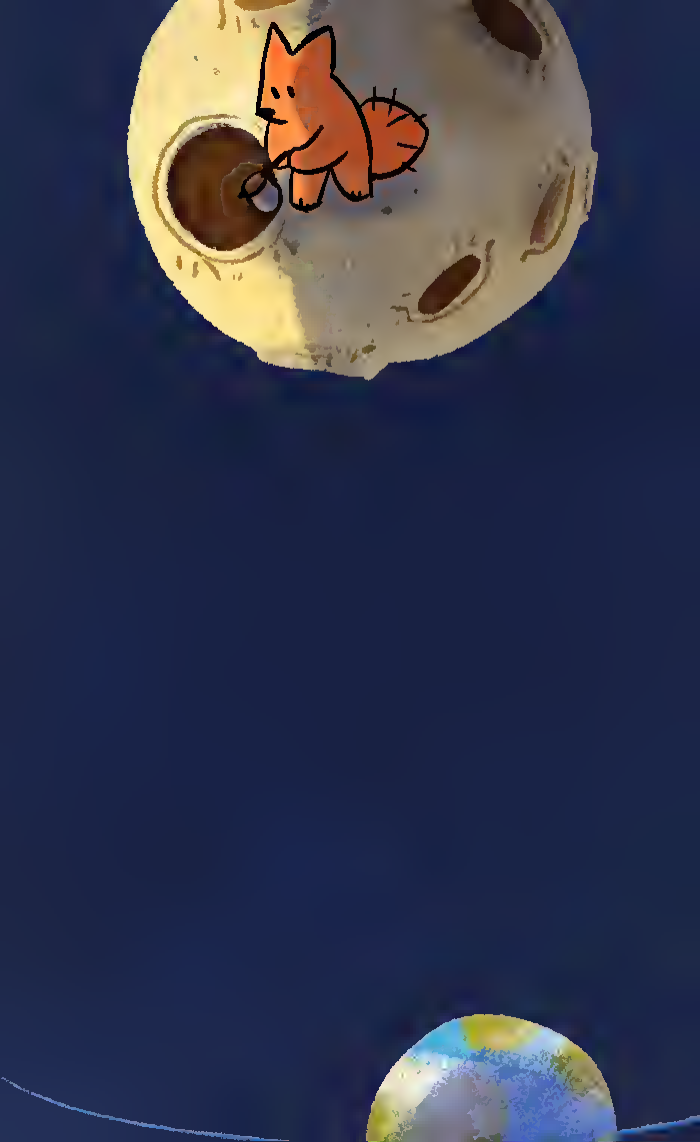
"Earthlephunk" has 3 moons.

The lightest-colored moon#1 "Foxy", reflects light to other planets



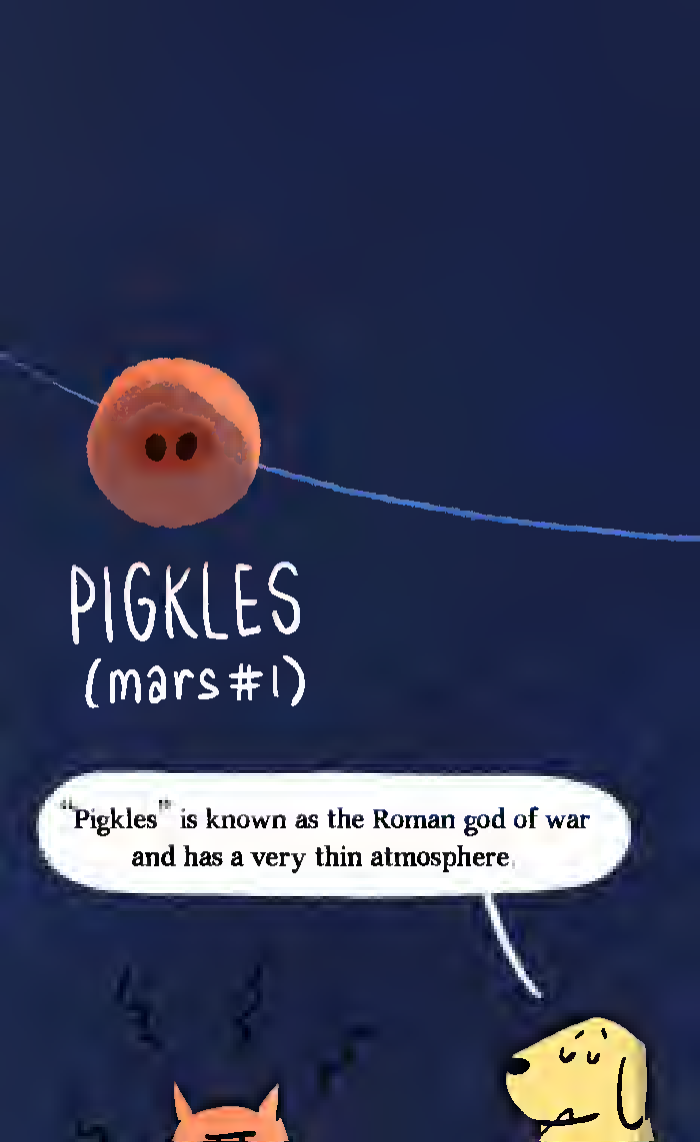
It's also covered with craters that are filled with coffee.





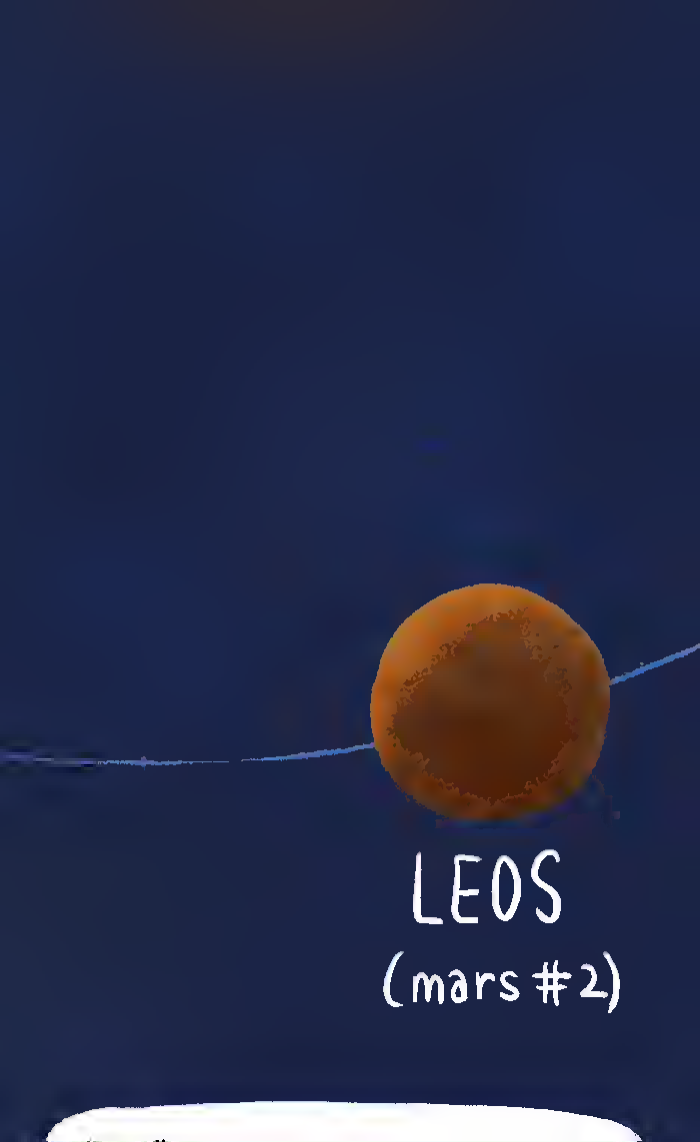
ANNTEARTH
(earth #2)
"Anntearth" is the other human-livable planet in the RSJ solar system.

It has one moon called “Anna”.



PIGKLES
(mars #1)
"Pigkles" is known as the Roman god of war and has a very thin atmosphere.

There is frequent volcanic eruption on the planet due to anger and various strong emotions



LEOS
(mars #2)

"Leos" has an orbit that follows Venus-B.

Volcanic eruptions occur on "Leos" when there is too much consumption of junk food

FAN BELT

(asteroid belt)
What's up?
Hi!
I'm new to RSJ!

JUPIAGER
(jupiter #1)
"Jupiager" rotates very fast, and it's atmosphere consists of a whirlwind of thoughts and ideas.

Although the vacuum of the universe is silent.
the gaseous planet of "Jupiager" is full of
music and noises.

JUPIALLIE
(jupiter #2)

Unlike Jupiager, "Jupiallie" has a very thick and rough surface

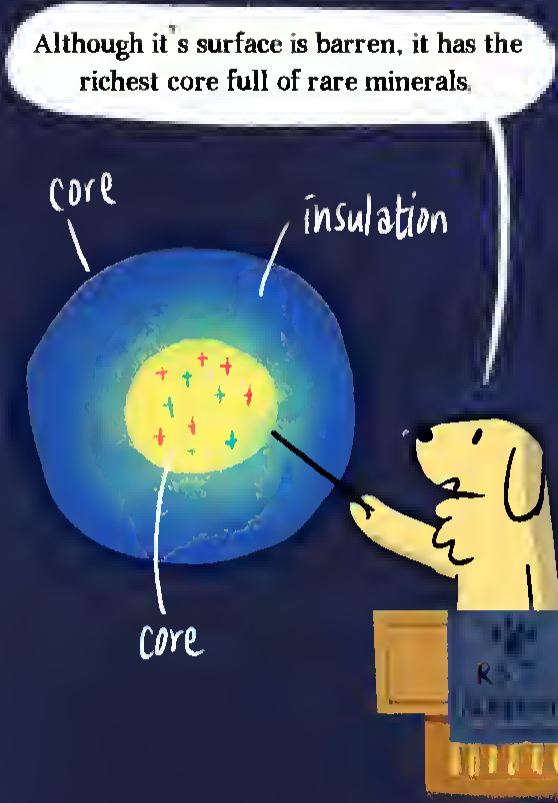
But underneath the thick crust
the planet has a core of hot springs.

SATIAFFIEL
(saturn)

"Satiaffiel" is has three rings made of waste debris to keep the planet warm.
This is my scarf
The waste debris that makes up the rings comes from "Satiaffiel"'s abandoned writings

URANGLAS
(uranus #1)

"Uranglas" is a quiet and slow orbiting planet.



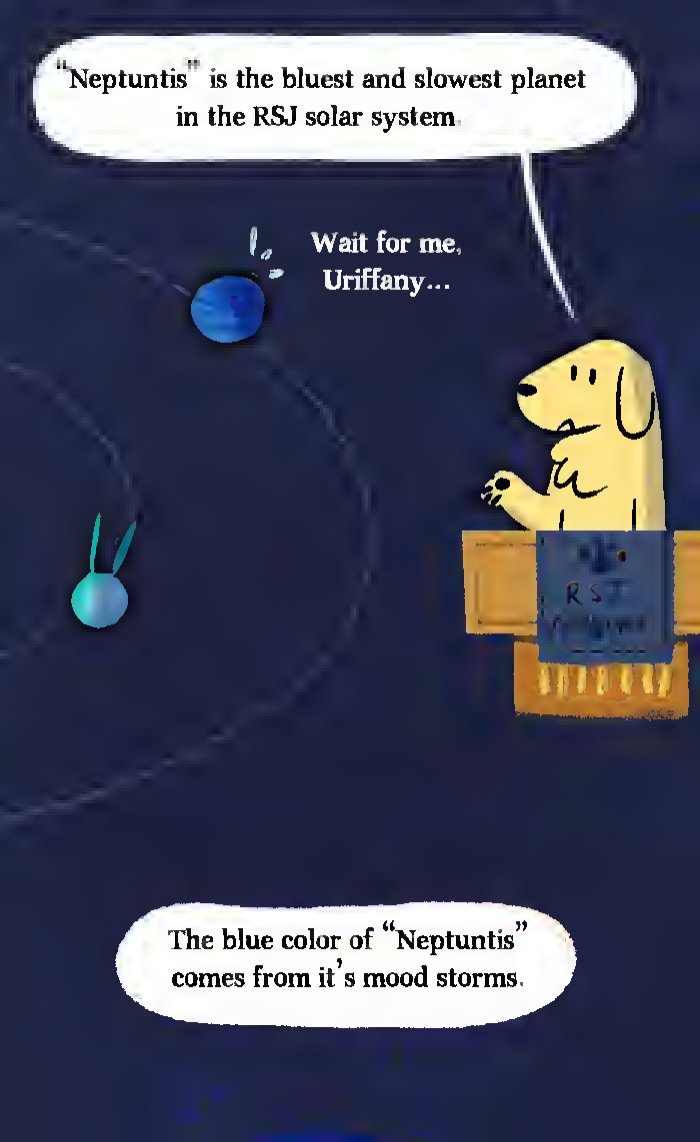
Although it's surface is barren, it has the richest core full of rare minerals.
core
insulation
core

ABANDONED
STORIES & IDEAS
(comets)

URIFFANY
(uranus #2)
"Uriffany" is said as the prettiest planet in the RSJ solar system.
Tiffany blue
Rol pink

The mash of colors comes from the blue crystal mountains and pink marshmallow clouds.

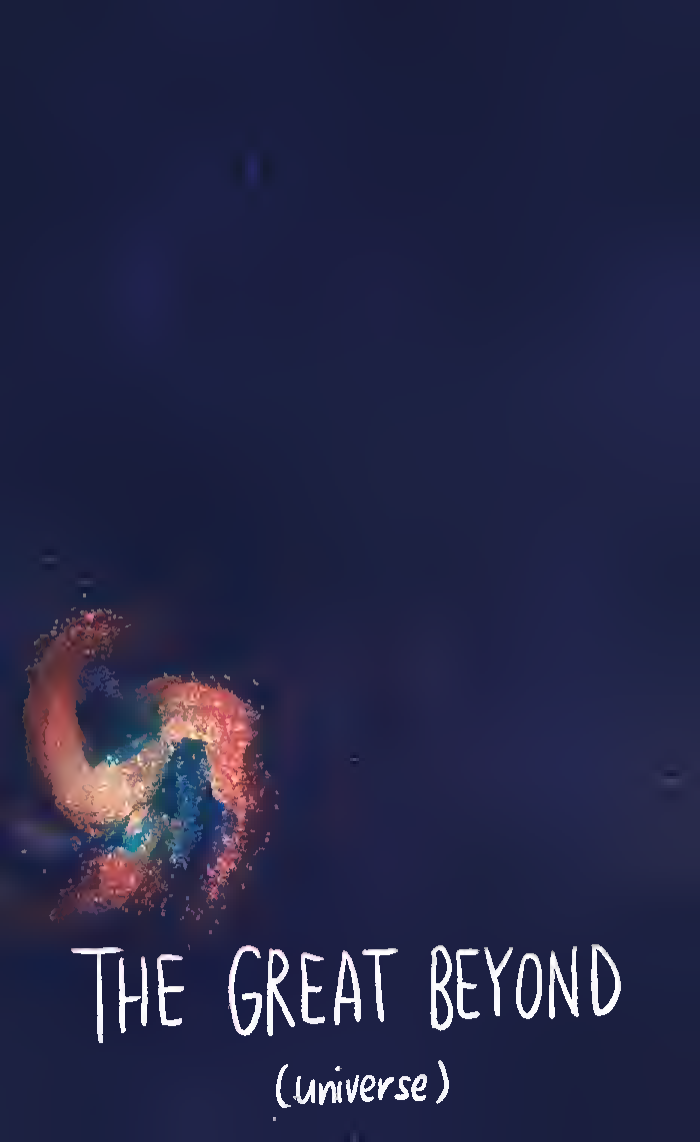
NEPTUNTIS
(neptune)



"Neptuntis" is the bluest and slowest planet in the RSJ solar system.
Wait for me, Uriffany...
The blue color of "Neptuntis" comes from it's mood storms.

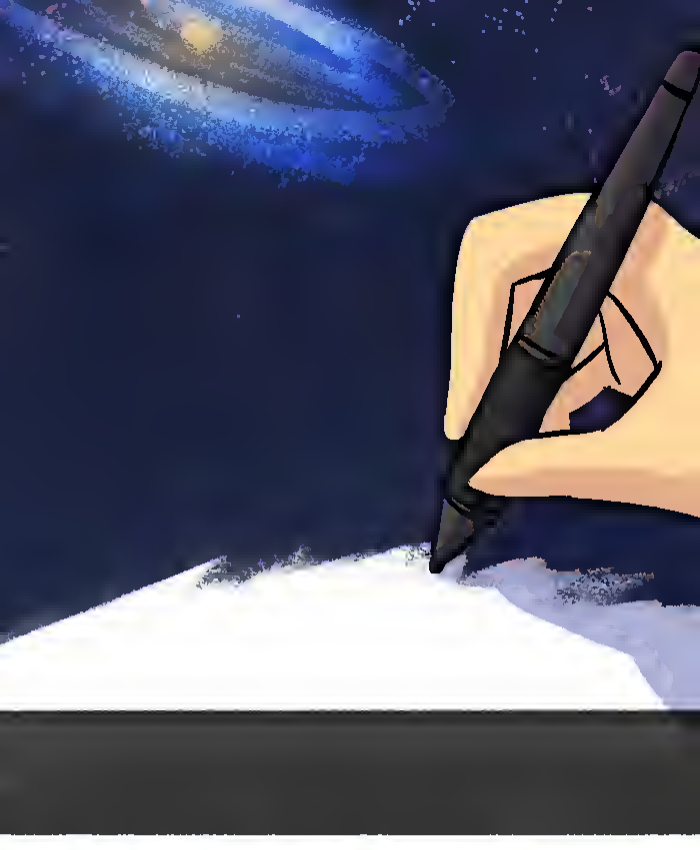
POTO
(pluto)
"Poto" is the furthest in the RSJ solar system, and some say it doesn't qualify as a planet.

The surface of "Poto" is extremely cold and covered with ice, but it has a core made of hot chocolate lava.



THE GREAT BEYOND
(universe)

Who know what lies beyond the RSJ solar system? Maybe it's new characters and comics.



I've got the universe under my pen...
woah

ROAR STREET JOURNAL

...rather than burning up or burning out.
Arghhh I'm so stressed
I don't wanna draw no more

I ran out of inspiration...
